

METHOD AND SYSTEM FOR CLEANING A SHOWER

ABSTRACT OF DISCLOSURE

A cleaning system for automatically cleaning a shower and a method of operating thereof is described. The cleaning system comprises a cleaning solution reservoir configured to hold a cleaning solution; a fluid dispensing device configured to dispense the cleaning solution within the shower; a pumping system coupled to the cleaning solution reservoir and configured to supply the cleaning solution from the cleaning solution reservoir to the fluid dispensing device; and a power source coupled to the pumping system, and configured to provide the pumping system with power for pumping the cleaning solution. Additionally, the cleaning system further comprises a control system for controlling the cleaning system.
